

Airport CDM @ FCO

General Informations

Leaflet 6

DEFINIZIONE

• The flight shall be READY before TOBT+5min. If NOT READY the flight will be suspended from the pre-departure sequence and a new TOBT has to be inserted in FAST

• Every TOBT manual update must be at least 5' after the input clock time and/or from the previous value.

• If the a/c, after the ARDT, would be effectively not ready, the TOBT and the TSAT will be cancelled and a new TOBT shall be declared

Target Off-Block Time (TOBT) and Ready Time(ARDT)

Ready Time (defined in the AMS procedures on the AIRPORT RULES MANUAL) represent the interface between the airport turnaround processes and the ATC pre-departure sequence. This milestone is checked by Airport Coordination Centre Operators through TVCC

The Flight shall be READY before TOBT+5min, if not the flight will be suspended from the pre-departure sequence

READY TIME CHECK

$ARDT \leq TOBT + 5min$

An alarm will be raised in the FAST platform and the flight is suspended from the pre-departure sequence. To reactivate the flight a new TOBT (compliant with the EOBT of the ATC flightplan) has to be inserted in the platform
